

Tangent InfoCom comes to you as a complete and end to end Data Centre Solution & Services provider.

We believe that your data centre should go beyond enabling your business - and accelerate it.

Tangent's Data Centre Consulting Services are an enterprise-wide, consultative approach to help you manage mission critical environments. The services encompass the entire lifecycle, right from assessment, strategy and design, to implementation and operational services. We have the expertise, proven methodologies and tools to help you manage your data center investments, improve operations and performance, and deliver business results.

**Technology Integration, Consulting,
Training & Managed Services**

Network downtime means lost revenue and lost jobs.

Today, you are coming under fire because Data Center project is over budget and months late. Even worse, your management team pushed you to accept the architect's idea of your computer room that today won't even deliver the most basic needs - enough space, adequate security & fire protection, ample power, and sufficient cooling.

Now picture a different scenario. But this time, you have earned the respect and appreciation of your company by having properly planned, designed, and delivered an always available data center project. **Within scope. On time. and very importantly Within budget.**

What makes the difference in these two scenarios? It's **Tangent**, when your management team came to you expecting you to provide the new computer rooms, power and cooling requirements, you had a data center design expert you turned to - an expert who had your best interests in mind. An expert who understood the obstacles in providing constant network availability, translated how future IT services impacted the critical load, and conceptualized how the resulting supporting infrastructure impacted the budget.

A Good Plan Pays for Itself.

We know it's your job to deliver on managements expectations of always available network services. Further, we know that you can't be accomplished that without a room and supporting infrastructure equal to the task. Our data center planning, and pre-design, consulting services ensure your company gets the always available data center it requires from the start.

Clear project cost guidance as it relates to the overall availability expectation
Accurate existing equipment & conceptual IT services critical load profiling
Expert understanding of data center design standard, and not-so-standard, practices.
A good plan is the key to delivering a successful project. And a good project manager prevents as many things from going wrong as possible by using that plan.
At **Tangent**, were in the planning business along with you.

Cost Versus Availability.

Everyone wants a **7x24x365** environment. However, the impact of delivering that kind of performance is far-reaching. Availability is more than the reliability of components used and the redundancy by which they are configured. Systems must be concurrently maintainable as well. This means that as absolutely necessary periodic maintenance is performed, systems must be able to be completely brought off-line without impacting the load.

Not surprisingly, the greater the availability expectation, the greater the cost.

Tangent helps you

- Determine the availability that is appropriate.
- Estimate potential costs at that risk level.

Accurate Critical Load Profiling

Most architects and consulting engineers rely on their IT staff to provide space as well as equipment load requirements to determine the required facility infrastructure. We translates IT equipment details directly into power, cooling, and space requirements for the facility. We have found that equipment nameplate or manufacturer specifications are insufficient in many cases and we have compiled our own techniques for such purposes. Additionally, **Tangent** has the project experience necessary to provide accurate load profiles and their facility infrastructure impact from conceptual IT initiatives and services without detailed equipment lists.

Standard and Not-so-Standard Practices

Tangent has developed a detailed set of design standards by which your data center availability can be accurately predicted. We understand the obstacles facing uninterrupted data center operations. And we know how to design and implement the solutions to mitigate them.

Save Money, Save Time save Your Data Center

Tangent is adequately qualified to help businesses assess their data center and support infrastructure risks, provide recommendations for improvement and offer accurate project cost estimating and guidance throughout implementation.
